

OneDrive Overview

What is OneDrive?

OneDrive is Microsoft's cloud storage service that lets you store files across devices and access them from anywhere.

What gets stored in OneDrive?

This can vary based on settings, but typically OneDrive syncs/stores:

- **Desktop** – (Items you have stored on your computer's Desktop.)
- **Documents** – (Items you have stored in your Documents folder.)
- **Pictures** – (Items you have stored in your Pictures folder.)

*OneDrive will also autogenerate folders (for synchronization purposes) as you use other apps like Outlook, Teams, OneNote.

How can I access OneDrive?

On your computer, you'll find your OneDrive in the File Explorer (left column).

On a browser, you can find it by visiting: <https://myapps.microsoft.com>, then choosing OneDrive.

On a phone you can find it by opening the OneDrive app. (You'll need to install this app and sign in.)
